JCAHO

On The Job Back Injuries

What you need to know about OSHA, JCAHO and CMS regulations and standards... and how to analyze the real cost of those injuries.

“Nursing personnel have the highest claim rates related to back strain, pain and injury of any occupation or industry.”⁷

Published as an industry service by Sandel Medical Industries, LLC

OSHA

Each employer shall furnish to each of his employees a place of employment which is free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees. **1**

Manual lifting of residents be minimized in all cases and eliminated when feasible. Employers implement an effective ergonomic process that: provides management support; involves employees; identifies problems; implements solutions; addresses reports of injuries; provides training; and evaluates ergonomics efforts. **2**

JCAHO

Standard EC.1.10 The hospital* manages safety risks. *Elements of Performance:* The hospital conducts proactive risk assessments that evaluate the potential adverse impact of buildings, grounds, equipment, occupants, and internal physical systems on the safety and health of patients, staff and other people coming to the hospital's facilities...and the hospital uses the risks identified to select and implement procedures and controls to achieve the lowest potential for adverse impact on the safety and health of patients, staff and other people coming to the hospital's facilities. **3**

Standard EC.9.10 The hospital monitors conditions in the environment. *Elements of Performance:* The hospital monitors conditions in the environment including injuries to patients or others coming to the hospital's facilities as well as incidents of property damage and occupational illnesses and injuries. **4**

CMS

Medicare Conditions of Participation (CoPs) Compliance with Federal, State and local laws. (a) The hospital must be in compliance with applicable Federal laws related to the health and safety of patients. The hospital must be approved as meeting standards for licensing established by the agency of the State or locality responsible for licensing hospitals. CFR 482.11 **5**

*The term Hospital also refers to all types of medical facilities.

Facts You Should Know

2

12% of nurses leave the profession annually as the result of back injury. **6**

Direct costs associated with occupational back injuries of health care providers average \$37,000. Indirect costs associated with back injuries can range from \$147,000 to \$300,000. **14**

6.1% of private sector employees suffered 5.7 million workplace injuries and illnesses. 46% of those injury cases required days away from work for recuperation or restricted work activity. **8**

A total of 626,000 lost workdays due to musculoskeletal disorders (MSDs) are reported to the Bureau of Labor Statistics, accounting for \$1 of every \$3 spent for workers' compensation in that year. **13**

Work-related injuries potentially affect every aspect of life. **9**

Work-related musculoskeletal disorders (MSDs) currently account for one-third of all occupational injuries and illnesses reported to the Bureau of Labor Statistics (BLS) each year. **10**

Research demonstrates that specific interventions can reduce the reported rate of musculoskeletal disorders for workers who perform high-risk tasks. **11**

Employers pay more than \$15-\$20 billion in workers' compensation costs for musculoskeletal disorders (MSDs) every year. **12**

Benefits of Using Disposable Patient Transfer Devices

- Reduced staff back injury.
- Reduced possibility of cross contamination.
- Up to 48% lower insurance premiums. **15**
- Up to 95% reduction in back injuries. **16**
- Reduce Workers' Compensation claims.
- Increased staff safety.
- Reduced time spent locating transfer device.
